

# 66 METRES – RISING SEA LEVELS

by Max Mönch, Alexander Lahl

## SYNOPSIS

A comprehensive documentary about sea level rise and its global impacts. How high will the oceans rise? Estimates that were considered panic-mongering just a few years ago are now in the realm of possibility. Already in 2100 the coasts of our planet could look different. The crucial question is: How will Greenland and Antarctica develop? Science is just beginning to include the complex dynamics in its forecasts. The results will determine how the coasts prepare for the impending threat. Up to what level can we protect ourselves? When will we have to think about abandoning areas because the cost of protection is no longer proportional to what is to be protected? Countries like Britain have already decided to abandon whole regions.

## CAST AND CREW

DIRECTOR Max Mönch, Alexander Lahl · PRODUCER Max Mönch, Alexander Lahl
