

LIFE FROM SPACE

by John A. Kantara, Fabian Wolfgang

SYNOPSIS

In this three-part series, we look at the monumental discoveries underway, specifically surrounding black holes, meteorites and exoplanets. Black holes have been revealed as one of the foundations for the basic conditions of life. We show how meteorites brought the basic substances of life to our planet, allowing for its creation, and we look at exoplanets as a possible habitat for humankind. The films describe the latest findings concerning cosmic events in relation to the origin of life, providing a grandiose perspective of what makes life possible.
