

THE UNKNOWN LIFE OF ANTARCTICA

by Lars Pfeiffer, Joanna Michna

SYNOPSIS

On King George Island, the gateway to Antarctica, five different nations operate research stations located in the most extraordinary of environments. Only together can researchers survive such hostile conditions.

King George Island on the edge of the coldest, loneliest continent on Earth. The island is the gateway to Antarctica. Located at its southwestern tip in an extraordinary landscape of rock and ice are research stations operated by five different nations: Chile, Russia, Uruguay, South Korea and China. Conflicting political views, motivations and cultures co-exist in the most confined of spaces. But in Antarctica you can only survive together. A special challenge in one of the most hostile parts of our planet. When researchers go to work on the island, everything has to be meticulously planned and organised – from food supplies to medical care. We get to know the crews and their families and we document their everyday life over the course of a year: from the Antarctic...
